

std::true_type

```
graph BT; A["detail::is_basic_json<NLOHMANN_BASIC_JSON_TPL>"] --> B["std::true_type"]
```

The diagram illustrates an inheritance relationship. A light gray box at the bottom represents the base class `detail::is_basic_json` with the template argument `< NLOHMANN_BASIC_JSON_TPL >`. A blue arrow points upwards from this box to a white box at the top, which represents the derived class `std::true_type`. Both boxes are divided into three horizontal sections.

detail::is_basic_json

< NLOHMANN_BASIC_JSON_TPL >
