

std::false_type

```
classDiagram
    class std_false_type["std::false_type"]
    class detail_has_from_json["detail::has_from_json< BasicJsonType, T, typename >"]
    detail_has_from_json --|> std_false_type
```

The diagram illustrates a class hierarchy. At the bottom is a grey-shaded class box for 'detail::has_from_json < BasicJsonType, T, typename >'. It has three horizontal compartments, with the first containing the class name. Above it is a white class box for 'std::false_type', also with three horizontal compartments, the first of which contains the class name. A blue arrow with an open triangular head points from the top of the 'detail::has_from_json' box to the bottom of the 'std::false_type' box, indicating that 'detail::has_from_json' inherits from 'std::false_type'.

detail::has_from_json
< BasicJsonType, T, typename >
