

std::true_type

```
classDiagram
    class std_true_type["std::true_type"]
    class detail_is_json_iterator["detail::is_json_iterator_of< BasicJsonType, typename BasicJsonType::const_iterator >"]
    detail_is_json_iterator --|> std_true_type
```

The diagram illustrates an inheritance relationship. A light gray box at the top represents the base class `std::true_type`, which has two empty slots below its name. A dark gray box at the bottom represents the derived class `detail::is_json_iterator_of< BasicJsonType, typename BasicJsonType::const_iterator >`, which has two empty slots below its name. A blue arrow with a triangular head points from the top of the derived class box to the bottom of the base class box, indicating that the derived class inherits from the base class.

detail::is_json_iterator
_of< BasicJsonType, typename
BasicJsonType::const_iterator >
