

`std::true_type`

```
graph BT; A[detail::is_complete_type< T, decltype(void (sizeof(T)))>] --> B[std::true_type];
```

The diagram illustrates an inheritance relationship. At the bottom is a gray box representing the base class `detail::is_complete_type< T, decltype(void (sizeof(T)))>`. A blue arrow points upwards from this box to a white box at the top representing the derived class `std::true_type`. The white box has three horizontal sections, with the top section containing the class name.

`detail::is_complete
_type< T, decltype(void
(sizeof(T)))>`
